

1. What factors influence perceptions of police effectiveness in handling cases related to women?

Question Type: Descriptive

Dataset: Police_baseline data.dta and Police_full data.dta

Variables:

- Treatment
- B_effective and e_effective: perceptions of police effectiveness.
- B_helpful: Perception of help from the police
-

Motivation: investigating the demographic factors that shape perceptions of police effectiveness in addressing women's issues is critical for identifying any underlying biases and training needs within the police department. Factors like age, gender, socioeconomic status, and cultural background could significantly influence how different communities view police effectiveness in handling sensitive cases related to women. By shedding light on these biases, police departments are given an opportunity to improve certain areas. Understanding these influences therefore could be vital for designing programs like targeted interventions, fostering community trust, and improving service delivery. Thus, leading to more effective police strategies that could better serve the needs of community members, particularly those in higher risk like women.

2. What factors predict the likelihood of a citizen visiting a police station based on survey data?

Question Type: Predictive

Dataset: Citizen_full data.dta

Variables:

- B_visit and e_visit: whether a household member visited a station at baseline and endline.
- B_pol_handling and e_pol_handling: perceptions of police effectiveness in handling CAW cases.
- Member_gender: Gender of the respondent.

Motivation: in understanding predictors of citizen visits to police stations, we can identify barriers that hinder access to police services. By analyzing various demographic factors like age, gender, socioeconomic status, police departments can gain valuable insights into the needs and concerns of the community. This analysis can highlight specific issues that stop citizens from seeking assistance like fear of discrimination, or negative past experiences. With this information, police departments can develop targeted outreach programs aimed at enhancing community engagement, building trust, and encouraging individuals to use the available services.
